

Whitepaper - Boltick

Executive Summary

Boltick is a platform that enables the creation and management of digital access in a simple and secure way. We use blockchain to transform tickets and memberships into unique credentials that cannot be counterfeited, are automatically validated, and allow benefits to be managed for each member. Best of all, neither the user nor the organizer needs to understand crypto technology, because everything is designed to be as easy as shopping online.

But Boltick is not just about technology. We aim for anyone?whether part of an event, club, gym, or community?to organize or participate in experiences without complications. We want to build a network where every ticket, every membership, and every validation adds value, connects communities operating through Boltick, and leaves an accessible, transparent footprint.

Problem and Opportunity

The current system for managing access to experiences, memberships, or events?anywhere in the world?suffers from a number of structural problems. From counterfeit tickets and failed validations, to apps that are downloaded for a single event and then abandoned, and the total fragmentation of communities. There is currently no solution that unites users, organizers, and providers within a single living and persistent environment.

The opportunity is clear: build a platform where any actor?event producers, gyms, clubs, cultural centers, providers, or end users?can not only manage access and benefits, but also become part of a connected and functional network. Boltick was born as a way to unite these worlds: tickets, memberships, benefits, and validation in a single ecosystem.

We believe a well-built digital community doesn't end when the event is over. We want to break away from the current model where everything resets. For example, in Boltick, a member of a sports club could receive benefits just for being part of that community if there's a concert in the same

venue. We connect realities, simplify management, and open new doors.

Unique Value Proposition (UVP)

Boltick is not just a platform for selling tickets: it's an all-in-one tool to manage digital access, memberships, benefits, and active participation within communities. Our value lies in connecting all experience stakeholders?users, organizers, providers, clubs, gyms, or cultural centers?into one living, functional, and lasting ecosystem.

Key features of the Boltick ecosystem:

- Digital access as unique and unfalsifiable NFTs
- Automatic, instant validation with no server dependency
- Membership management with adaptable benefits
- Interface designed for anyone to use, with no technical knowledge required
- Persistent ecosystem that accumulates history and connections beyond individual events
- Simple, powerful admin panel for any organizer, whether a production company or community institution

Our mission is to build an interoperable network where belonging to a community doesn't end with a ticket, but opens new doors. Being part of Boltick means access to more experiences, more benefits, and more real connections.

Boltick?s initial growth doesn't rely solely on NFT volume, but on acquiring strategic commercial partners. The key to success lies in organizers adopting the platform and seeing tangible benefits.

Once active, our approach is entirely data-driven: information will be the foundation for decisions across the ecosystem. Every action will be backed by real, concrete, and auditable data?not assumptions or isolated guesses. At Boltick, we believe correct measurement is the foundation of sustainable growth, and that's why our evolution will be guided by constant analysis of the activity,

behavior, and needs of participating communities.

Sustainability and Scalability

Boltick operates in a context where blockchain technology continues to evolve and establish itself as a key tool for managing digital value. We know long-term growth can't rely on promises: every move must be guided by precise, useful data. That's why our sustainability is rooted in a data-driven mindset, where every decision—from product to finances—is based on measurable realities.

We don't aim to grow recklessly or hoard capital without purpose. Our goal is to progress step-by-step, with strong foundations, creating validated real value. All investments made in Boltick will be directed toward functional, impactful objectives. This ensures that each stage of growth is backed by tangible results and concrete needs from within the ecosystem.

Team

- Misael: Oversees operations, building relationships with communities, venues, and key ecosystem players. As an active DJ, he remains connected with the cultural and music scene, contributing valuable contacts and alignment with relevant spaces.

- Matías: Leads the tech side, ensuring the platform is functional, fast, and scalable. His experience in startups and affinity for emerging technologies like AI make him a technical pillar for Boltick.

- Jerónimo: The visionary behind the idea, setting the direction of the project and coordinating overall progress. He has a clear understanding of how to connect blockchain with real-world purpose, working daily to turn that vision into an accessible and scalable structure for all participants.

? Complete Flow of the Boltick Ecosystem

1. Capital Inflow: The Starting Point

The Boltick ecosystem begins with the inflow of capital. This money can come from two main sources: private investors or initial sales made through the platform. This incoming capital is divided

into two parts:

- Capital: used to cover operational, development, and maintenance expenses.
- Treasury (previously 'Boltick Account'): plays a key role in backing the value of the BOLT token, directly supported by funds.

This backing ensures the token has real value from day one, generating trust among users and event producers.

2. BOLT Token: Dual Backing and Multiple Functions

The BOLT token is the core of the Boltick ecosystem. It serves not only as a medium of exchange within the platform, but is also backed differently depending on how it is acquired:

- If a user buys BOLT with Argentine pesos (fiat currency), it is backed 1:1 by funds held in the treasury.
- If purchased via blockchain using stablecoins, a liquidity pool is generated to act as crypto collateral.

This means the token does not have a single absolute value, but its exchange rate can vary depending on its origin. In the future, it will be possible to swap the token for its equivalent in either pesos or stablecoins.

3. Utilities of the BOLT Token

The BOLT token was designed with practical and strategic utilities throughout the ecosystem, divided into two main groups:

? Operational Utilities (already implemented in the MVP):

- Purchase of NFTs: Users can use BOLT to buy NFTs representing event tickets, consumables, or products.

- Event access and memberships: Producers can offer exclusive memberships, VIP passes, or tiered entry via NFTs.
- Tokenized consumables: Food, drinks, and merchandise can be purchased through NFTs within the event, paid in BOLT.

? Strategic Utilities (in development):

- Investors: Users will be able to stake their BOLT tokens in smart contracts to fund events or operations, earning yield upon successful completion.
- Producers: Can receive BOLT as upfront financing and repay it post-event. This model gives them liquidity before generating sales.

4. Boltick Revenue Model

Boltick is not just a platform?it has a concrete business model that allows it to scale and remain sustainable. Main revenue sources include:

- NFT sale commission: Boltick charges a percentage on every NFT sold through the platform (e.g. 3%).
- Swap commission: Every time a user exchanges fiat for BOLT (or vice versa), or swaps stablecoins for BOLT, a small commission is retained.
- Financing revenue: When events are tokenized for pre-investment, Boltick charges a fee for acting as intermediary, structurer, or guarantor of the process.

5. Future Projects

Boltick?s roadmap doesn?t stop at ticketing. The goal is to create a complete economy for tokenized events. Upcoming developments include:

- NFT resale marketplace: Where users can resell their tickets or consumables.
- Tokenized consumables: Allowing attendees to pre-purchase drinks, meals, or other items.
- Artist and vendor payments in BOLT: Decentralizing event production.

- Direct investment in events: Any user can invest in a tokenized event and receive returns if goals are met.
- Ecosystem gamification: Affiliate programs, participation-based rewards, status NFTs, and a growing community.

? Final Summary

Boltick is more than a ticketing platform. It's a developing ecosystem where events are decentralized, access and consumption are tokenized, and money becomes transparent. With a token backed by real assets and a business model that benefits users, producers, and investors, Boltick proposes a new way to organize, finance, and experience events.
